

## **EPA UCMR4 (Fourth Unregulated Contaminant Monitoring Rule) Environmental Laboratory Testing**

PDC Laboratories, Inc. is currently becoming fully certified for UCMR4. PDC has been approved by the USEPA to participate in Proficiency Testing (PT) and is currently analyzing PT's. After successful completion of the EPA PT studies for each method, the USEPA will provide certification before January 2018.

PDC will provide the sampling kit, UCMR data electronically uploaded into the EPA CDX SDWARS site, 24/7 access to your data via PDC's Client Connect password-protected site, and sampling technical assistance at no additional charge.

All large Public Water Supplies (PWS) serving 10,000 or more people are required to participate and are responsible for selecting a certified lab, sample collection and cost. The EPA will also randomly select 800 small PWS's (serving <10,000) to participate and will pay the costs associated with monitoring at small systems.

### **UCMR4 Methods:**

Metals, EPA 200.8, Germanium and Manganese

Total Microcystin, EPA ELISA

Pesticides, EPA 525.3

Semivolatiles, EPA 530

Alcohols, EPA 541

Microcystins & Nodularin, EPA 544

Cylindrospermopsin & Anatoxin-a, EPA 545

Haloacetic Acids, M552.3

Total Organic Carbon (TOC), SM5310C

Bromide, EPA 300.0
