- Privately held, PDC's owners are close to operations.
- NELAC accredited laboratory
- Financially Secure!
- Fastraktm

PDC Laboratories Inc. (PDC) in St. Louis is a full service analytical testing laboratory with the differentiating quality of Fastraktm service. As the forerunner in having the capability of producing quality, fast turn analysis, we offer a variety of data turnaround options.

The St. Louis facility utilizes the QC policies established by the main lab in Peoria and has the full support of the larger Peoria facility. This location offers a similar list of analysis with the exception of drinking water.

PDC St. Louis offers method development for problem solving non-routine analysis. This encompasses treatability analysis for on-site remediation projects as well as troubleshooting contamination issues for industrial processes. With an average of 18 years experience per employee, we have the expertise and practical working knowledge to be your problem solving resource.

The St. Louis Sampling Division includes the expertise of Dr. Larry Oliver. Dr. Oliver received his Bachelor's in Chemistry and his PhD in Nuclear Chemistry from University of Missouri-Rolla. He also teaches HazMat courses

at St. Louis University, giving us the capability of offering training at your facility.

The PDC team has extensive sampling experience and with our combined Chemistry background makes for a valuable resource working with permits and helping resolve compliance issues.

Transformer oil maintenance analysis is one more area of expertise that is offered at the St Louis location. This analysis is specific to the power transmission and distribution industry. PDC's oil testing service is one of the most effective tools you can have to avoid the expense of unexpected transformer failures and emergency change outs. Visit the transformer link on our website www.pdclab.com or go direct to www.pdctransformeranalysis.com for additional information.
